

# **Storage Bridge 1.1 Release Notes**

*What's New in Storage Bridge 1.1 . . . . . 2*

*Upgrading Storage Bridge to Version 1.1 . . . . . 2*

This document provides release information for Storage Bridge version 1.1.

## What's New in Storage Bridge 1.1

### Disaster Recovery Wizard

With version 1.1 you can recover a failed recording server or the data of a recording storage/archive using the Storage Bridge Disaster Recovery Wizard. Except for preparing a new machine with identical volumes (recording server failure) or identical volumes of the same server (recording storage/archive failure), the wizard guides you and performs all other necessary steps for you.

For more information, refer to the Storage Bridge 1.1 Administration Guide.

### Recording Server Monitoring Improvements

The XProtect Management Client plug-in lists recording server icons with an indicator, designating the server status as well as the status of its recording storages/archives and any enabled disaster recovery storages and/or extensions.

For more information, refer to the Storage Bridge 1.1 Administration Guide.

### Retrying a Failed Manual Job

In case a manual Storage Bridge job fails, if the extension/disaster recovery storage is temporary inaccessible, for example, instead of configuring the job parameters again, you can simply click Retry next to it in the list to queue it for execution again.

## Upgrading Storage Bridge to Version 1.1

To upgrade Storage Bridge on your recording server(s) and the Storage Bridge plug-ins on your XProtect Management Client and XProtect Smart Client, you simply need to run the respective installation file, following the steps in the Storage Bridge Administration Guide. The upgrade procedure does not require to restart the recording server(s), the XProtect Management Client or the XProtect Smart Client. After upgrading to the new version, all configuration settings are preserved.

**Important:** *When upgrading the Storage Bridge plug-ins, you must close the XProtect Management Client application and the XProtect Smart Client application.*
